WELCOME TO ANESTHPLOT'S DOCUMENTATION!

anesthPlot is a python package developped to extract, manipulate and plots anesthesia data recorded from the Monitor Software to be used mostly in a teaching environment.

Warning: This project is:

- · a work in progres
- the processes are mainly focused on horses anesthesia
- in our environment the data recorded came from either
 - an as3 or as5 anesthesia monitor (ekg, invasive pressure, etCO2, halogenate, spirometry)
 - a Taphonius equine ventilator
 - (some ekg data extracted using a Televet holter system)

1.1 Features

- you can load recordings from a trend or a wave file
 - from command line:

```
python anesthPlot/anesplot/__main__.py
-> will open an GUI choose menu to select the recording
(monitorTrend, taphoniusTrend, monitorWave, televetWave(export))
```

- * will build a standard debriefing (trends) plot series (script usage)
 - $\cdot\,$ global histograms (cardiovascular and an esthesia summary)
 - · cardiovascular trends time based plots
 - · respiratory trends time based plots
 - · anesthesia trends time based plots
- * or will build a plot for wave recording
 - · one or two waves on the same plot (script usage)
- you can also use this code as a python package
 - usage:

- additional functions are available to extract instaneous heart rate
 - * see anesplot/treatrec/ekg_to_hr.py

MAIN SCRIPT

2.1 anesplot.record main module

```
main script/module to load and display an anesthesia record
can be runned as a script:: python record_main.py
or imported as a package:: import anesplot.record_main as rec %gui qt5 (required only to use the dialogs if using
     spyder) trends = rec.MonitorTrend() waves = rec.MonitorWave(rec.trendname_to_wavename(trends.filename))
anesplot.record_main.choosefile_gui(dirname=None)
     Select a file via a dialog and return the (full) filename.
          Parameters dir_path (str) – location to place the gui ('generally paths['data']) else home
          Returns fname[0] – filename
          Return type str
anesplot.record_main.trendname_to_wavename(name)
     just compute the supposed name
anesplot.record_main.select_type(question=None, items=None, num=0)
     select the recording type:
          Returns kind – kind of recording in [monitorTrend, monitorWave, taphTrend, telvet]
          Return type str
anesplot.record_main.select_wave(waves, num=1)
     select the recording type:
          Returns kind – kind of recording in [monitorTrend, monitorWave, taphTrend, telvet]
          Return type str
anesplot.record_main.plot_trenddata(datadf, header, param_dico)
     clinical main plots of a trend recordings
     parameters df: pdDataframe
          recorded data (MonitorTrend.data)
     header [dict] recording parameters (MonitorTrend.header)
     param_dico [dict] plotting parameters (MonitorTrend.param)
          Returns afig_dico
          Return type dict of name: fig
```

```
class anesplot.record_main.MonitorTrend(filename=None, load=True)
     Bases: anesplot.record_main._SlowWave
     monitor trends recordings:
          input = filename : path to file load = boolean to load data (default is True)
          file [str] short name
          filename [str] long name
          header [dict] record parameters
          param [dict] parameters
          clean_trend [external] clean the data
          show_graphs [external] plot clinical main plots
class anesplot.record_main.TaphTrend(filename=None)
     Bases: anesplot.record_main._SlowWave
     taphonius trends recordings
     input ... FILLME
     attributes ... FILLME
     extract_taph_actions(data)
          extract Taph actions
              Parameters data (pandas dataframe) – record df form taphonius recording)
               Returns
              Return type actiondf pandas dataframe
class anesplot.record_main.TelevetWave(filename=None)
     Bases: anesplot.record_main._FastWave
     class to organise teleVet recordings transformed to csv files. input:
          filename: str (fullpath, default:None)
class anesplot.record_main.MonitorWave(filename=None, load=True)
     Bases: anesplot.record_main._FastWave
     class to organise monitorWave recordings. input: filename = path to file load = boolean to load data (default
          is True)
     attibutes ... FILLME
     methods ... FILLME
anesplot.record_main.main(file_name=None)
     main script called from command line call: "python anesthPlot/anesplot/__main__.py" args: optional filename
     (fullname)
     return: set of plots for either monitorTrend, monitorWave oe televet recording
```

CHAPTER

THREE

MODULES

3.1 anesplot package

3.1.1 Subpackages

anesplot.config package

Submodules

anesplot.config.build_recordrc module

build a 'recordRc.yaml' configuration file to adapt to a specific computer location at the root of anesplot

- input <-> 'data' : to load the records
- output <-> 'save' : to save the plots

```
ane splot.config.build\_recordrc. \textbf{filedialog}(kind=", directory='/Users/cdesbois/pg/chrisPg/anesthPlot/anesplot/config', for\_open=True, fmt=", is\_folder=False) \\ general dialog function.
```

```
anesplot.config.build_recordrc.read_config()
    locate & load the yaml file.
```

anesplot.config.build_recordrc.write_configfile(path)
 record the yaml file.

anesplot.config.load_recordrc module

load an already generated 'recordRc.yaml' configuration file

- input <-> 'data': to load the records
- output <-> 'save' : to save the plots

```
anesplot.config.load_recordrc.build_paths()
     read the yaml configuration file.
anesplot.config.load_recordrc.adapt_with_syspath(path_dico)
     add the folder location to the system path.
Module contents
```

anesplot.loadrec package

Submodules

anesplot.loadrec.explore module

Created on Thu Mar 12 16:52:13 2020

@author: cdesbois

anesplot.loadrec.explore.gui_choosefile(paths=None) select a file via a dialog and return the file name.

anesplot.loadrec.loadmonitor trendrecord module

Created on Wed Jul 24 13:43:26 2019 @author: cdesbois

load a monitor trend recording:

- · choose a file
- · load the header to a dictionary
- load the date into a pandas dataframe

```
anesplot.loadrec.loadmonitor_trendrecord.choosefile_qui(dirname=None)
     Select a file via a dialog and return the (full) filename.
          Parameters dir_path (str) – location to place the gui ('generally paths['data']) else home
          Returns fname[0] - filename
          Return type str
anesplot.loadrec.loadmonitor_trendrecord.loadmonitor_trendheader(filename)
     load the file header.
          Parameters filename (str) – full name of the file
```

Returns header

Return type dict

anesplot.loadrec.loadmonitor_trendrecord.loadmonitor_trenddata(filename, headerdico) load the monitor trend data

Parameters

• **filename** (*str*) – fullname

• **headerdico** (*dict*) – fileheader

Returns df = trends data

Return type pandas. Dataframe

anesplot.loadrec.loadmonitor_waverecord module

Created on Wed Jul 24 14:56:58 2019 @author: cdesbois

load a monitor wave recording:

- · choose a file
- load the header to a pandas dataframe
- load the date into a pandas dataframe

 $ane splot.load rec.load monitor_wave record. \textbf{choosefile_gui} (\textit{dirname} = None)$

Select a file via a dialog and return the (full) filename.

Parameters dir_path (str) – location to place the gui ('generally paths['data']) else home

Returns fname[0] - filename

Return type str

 $an esplot.load rec.load monitor_wave record.load monitor_wave header(\textit{filename}=None) \rightarrow dict load the wave file header.$

Parameters filename (str) – full name of the file

Returns header

Return type dictionary

anesplot.loadrec.loadmonitor_waverecord.loadmonitor_wavedata(filename=None) load the monitor wave csvDataFile.

Parameters filename (str) – full name of the file

Returns df = trends data

Return type pandas.Dataframe

anesplot.loadrec.loadtaph trendrecord module

Created on Wed Jul 24 15:30:07 2019 @author: cdesbois

load a taphonius data recording:

- · choose a file
- · load the patient datafile to a dictionary
- load the physiological date into a pandas dataframe

nb = 4 files per recording:

- .pdf -> anesthesia record 'manual style'
- .xml -> taphonius technical record -> to be extracted

• Patient.csv -> patient id and specifications

```
• SD...csv -> anesthesia record
anesplot.loadrec.loadtaph_trendrecord.build_taph_decodedate_dico(pathdict=None)
     list all the taph recordings and the paths to the record: input:
          paths: dictionary containing { 'taph': pathToTheData}
     output: dictionary: {date : filename}
anesplot.loadrec.loadtaph_trendrecord.extract_record_day(monitor_file_name)
     extract the date as 'YYYY_MM_DD' from a monitor_filename input:
          monitor file name (shortname)
     output: day: YYYY MM DD str
anesplot.loadrec.loadtaph_trendrecord.choose_taph_record(monitorname=None)
     select the taph recording: input:
          taphdico: {date:path} builded from build_taph_decodedate_dico()' year = integer to place the pointer
          in pull down menu date = to be implemented (as year but to extract from monitor filename)
     output: filename (str) full path
anesplot.loadrec.loadtaph_trendrecord.loadtaph_trenddata(filename)
     load the taphoniusData trends data.
          Parameters filename (str) – fullname
          Returns df = trends data
          Return type pandas. Dataframe
anesplot.loadrec.loadtaph_trendrecord.loadtaph_patientfile(filename)
     load the taphonius patient.csv file input:
          filename [(str) the full filename] (the headername will be reconstructed inside the function)
     output: descr = dict of patient data
anesplot.loadrec.loadtelevet module
Created on Wed Jul 31 16:22:06 2019 @author: cdesbois
load televet exported (csv) data: to be developped
anesplot.loadrec.loadtelevet.choosefile_gui(dirpath=None)
     select a file using a dialog.
          Parameters dir_path (str) - optional location of the data (ex : paths['data'], default : 'home')
          Returns filename (full path)
          Return type str
```

```
anesplot.loadrec.loadtelevet.loadtelevet(fname=None, all_traces=False)
load the televetCsvExportedFile.
```

Parameters

- **file** (str) name of the file
- all_traces (bool) load all the derivations

Returns df = recorded traces

Return type pandas.Dataframe

Module contents

anesplot.plot package

Submodules

anesplot.plot.trend_plot module

Created on Tue Apr 19 09:08:56 2016 @author: cdesbois collection of functions to plot the trend data

```
\label{limits} \verb|anesplot.plot.trend_plot.remove_outliers| (\it{df}, \it{key}, \it{limits=None}) \\ | remove outliers input:
```

df: pandas.Dataframe key: a column label limits: dictionary of key:(limLow, limHigh)

output: pandas.series without the outliers

anesplot.plot.trend_plot.color_axis(ax, spine='bottom', color='r') change the color of the label & tick & spine.

Parameters

- ax (matplotlib.pyplot.axis) the axis
- **spine** (*str*) optional location in ['bottom', 'left', 'top', 'right']
- **colors** (*str*) optional color

anesplot.plot.trend_plot.append_loc_to_fig(ax, dt_list, label='g') append vertical lines to indicate a location 'eg: arterial blood gas'

Parameters

- ax (matplotlib.pyplot.axis) the axis
- dt_list ([datetime]) list of datetime values
- **label** (*str*) a key to add to the label (default is 'g')

Returns res a dictionary containing the locations

Return type dict

```
anesplot.plot.trend_plot.save_graph(path, ext='png', close=True, verbose=True)
```

Save a figure from pyplot. :param path: The path (and filename, without the extension) to save the

figure to.

Parameters

- **ext** (*string* (*default='png'*)) The file extension. This must be supported by the active matplotlib backend (see matplotlib.backends module). Most backends support 'png', 'pdf', 'ps', 'eps', and 'svg'.
- **close** (*boolean* (*default=True*)) Whether to close the figure after saving. If you want to save the figure multiple times (e.g., to multiple formats), you should NOT close it in between saves or you will have to re-plot it.
- **verbose** (*boolean* (*default=True*)) Whether to print information about when and where the image has been saved.

anesplot.plot.trend_plot.plot_header(descr, param=None) plot the header of the file.

Parameters

- **descr** (*dict*) header of the recording
- param (dict) dictionary of parameters

Returns fig plot of the header

Return type pyplot.figure

anesplot.plot.trend_plot.hist_cardio(data, param=None) mean arterial pressure histogramme using matplotlib.

Parameters

- data (pandas.DataFrame) the recorded trends data (keys used: 'ip1m' and 'hr),
- param (dict) parameters (save=bolean, 'path': path to directory)

Returns fig matplotlib.pyplot.figure

```
anesplot.plot.trend_plot.plot_one_over_time(x, y, colour)
    plot y over x using colour
anesplot.plot.trend_plot.hist_co2_iso(data, param=None)
    CO2 and iso histogramme (NB CO2 should have been converted from % to mmHg)
```

Parameters

- data (pandas.Dataframe) the trends recorded data
- param (dict) dictionary of parameters

Returns fig pyplot.figure

Parameters

- data (pandas.Dataframe) the recorded trends data keys used :['ip1s', 'ip1m', 'ip1d', 'hr']
- param (dict) dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

Returns fig= pyplot.figure

```
anesplot.plot.trend_plot.cardiovasc_p1p2(data, param=None) cardiovascular plot with central venous pressure (p2)
```

Parameters

- data (pandas.Dataframe) the trends recorded data keys used :['ip1s', 'ip1m', 'ip1d', 'hr', 'ip2s', 'ip2m', 'ip2d']
- param (dict) dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

Returns fig= pyplot.figure

```
anesplot.plot.trend_plot.co2iso(data, param=None)
anesth plot (CO2/iso)
```

Parameters

- data (pandas.Dataframe) the recorded data keys used:['ip1s', 'ip1m', 'ip1d', 'hr']
- param (dictionary) dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

:returns fig= pyplot.figure

```
anesplot.plot.trend_plot.func(ax, x, y1, y2, color='tab:blue', x0=38)
anesplot.plot.trend_plot.co2o2(data, param)
respiratory plot (CO2 and Iso)
```

Parameters

- data (pandas.DataFrame) recorded trends data keys used:['ip1s', 'ip1m', 'ip1d', 'hr']
- param (dict) dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

Returns fig= pyplot.figure

```
anesplot.plot.trend_plot.ventil(data, param)
plot ventilation parameters (.tvInsp, .pPeak, .pPlat, .peep, .minVexp, .co2RR, .co2exp)
```

Parameters

- data (pandas.DataFrame) recorded data, keys used :['ip1s', 'ip1m', 'ip1d', 'hr']
- param (dict) dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

Returns fig= pyplot.figure

Parameters

- data (pandas.DataFrame) recorded data keys used :['ip1s', 'ip1m', 'ip1d', 'hr']
- param (dict) dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

:returns fig= pyplot.figure

```
anesplot.plot.trend_plot.ventil_cardio(data, param)
build ventilation and cardiovascular plot
```

Parameters

```
    data (pandas.DataFrame) – teh recorded trends data keys used :['ip1s', 'ip1m', 'ip1d', 'hr']
```

• param (dict) – dict(save: boolean, path['save'], xmin, xmax, unit, dtime = boolean for time display in HH:MM format)

Returns fig= pyplot.figure

```
anesplot.plot.trend_plot.save_distri(data, path)
```

save as 'O_..' the 4 distributions graphs for cardiovasc annd respi

anesplot.plot.trend_plot.fig_memo(path, fig_name)

append latex citation commands in a txt file inside the fig folder create the file iif it doesn't exist

anesplot.plot.wave_plot module

Created on Tue Apr 19 09:08:56 2016

@author: cdesbois

anesplot.plot.wave_plot.color_axis(ax, spine='bottom', color='r') change the color of the label & tick & spine.

Parameters

- ax (matplotlib.pyplot.axis) the axis
- **spine** (*str*) optional location in ['bottom', 'left', 'top', 'right']
- colors (str) optional color

 $\verb"anesplot.plot.wave_plot.plot.wave" (\textit{data, keys, param})$

plot the waves recorded (from as5)

Parameters

- data (pandas.DataFrame) the recorded trends data
- **keys** (*1ist*) one or two in ['wekg', 'ECG', 'wco2', 'wawp', 'wflow', 'wap']
- {mini (dict) limits in point value (index), maxi: limits in point value (index)}

Returns fig plt.figure the plot

Returns lines plt.line2D the line to animate

(Nb plot data/index, but the xscale is indicated as sec)

```
anesplot.plot.wave_plot.get_roi(waves)
```

use the drawn figure to extract the relevant data in order to build an animation

Parameters waves (MonitorWave object) – a wave recording

Returns a dictionary containing ylims, xlims(point, dtime and sec),

traces used to build the plot, the fig object :rtype: dictionary

anesplot.plot.wave_plot.create_video(waves, speed=1, save=False, savename='example', savedir='~') create a video from a figure input:

waves : waves object speed : integer, speed of the display save : boolean (default=False) savename : str (default='example') savedir : str (path, default='~'

Returns .mp4 file .png file

Module contents

Created on Tue Apr 19 09:08:56 2016

functions to plot the trend data

@author: cdesbois

anesplot.treatrec package

Submodules

anesplot.treatrec.clean data module

```
Created on Wed Jul 31 16:05:29 2019

@author: cdesbois
anesplot.treatrec.clean_data.clean_trenddata(df)
remove artifacts in the recorded trends
```

anesplot.treatrec.ekg_to_hr module

Created on Wed Feb 12 16:52:00 2020 @author: cdesbois

function used to treat an EKG signal and extract the heart rate typically (copy, paste and execute line by line)

0. after

:: import pandas as pd

import anesplot.record_main as rec from anesplot.treatrec import ekg_to_hr as tohr

1. load the data in a pandas dataframe:

(through classes rec.MonitorTrend & rec.MonitorWave)

```
trendname = '' # fullname
or
trendname = rec.choosefile_gui()
```

```
wavename = rec.trendname_to_wavename(trendname)
-
# load the data
trends = rec.MonitorTrend(trendname)
waves = rec.MonitorWave(wavename)
-
# format the name
name = trends.header['Patient Name'].title().replace(' ', '')
name = name[0].lower() + name[1:]
```

2. treat the ekg wave:

- · get parameters
- build a dataframe to work with (waves)
- · low pass filtering
- build the beat locations (beat based dataFrame):

3. perform the manual adjustments required:

- based on a graphical display of beat locations, an rr values
- build a container for the manual corrections:

```
figure = tohr.plot_beats(ekg_df.wekg_lowpass, beat_df)
to_change_df = pd.DataFrame(columns=beat_df.columns.insert(0, 'action'))
```

• remove or add peaks: zoom on the figure to observe only one peak, then:

• combine to update the beat_df with the manual changes:

• save the peaks locations:

```
tohr.save_beats(beat_df, to_change_df, savename='', savepath=None)
(# or reload
beat_df = pd.read_hdf('beatDf.hdf', key='beatDf') )
```

4. go from points values to continuous time:

```
beat_df = tohr.compute_rr(beat_df)
ahr_df = tohr.interpolate_rr(beat_df)
tohr.plot_rr(ahr_df, params)
```

5. append intantaneous heart rate to the initial data:

```
ekg_df = tohr.append_rr_and_ihr_to_wave(ekg_df, ahr_df)
waves.data = tohr.append_rr_and_ihr_to_wave(waves.data, ahr_df)
trends.data = tohr.append_ihr_to_trend(trends.data, waves.data, ekg_df)
```

6. save:

```
tohr.save_trends_data(trends.data, savename=name, savepath='data')
tohr.save_waves_data(waves.data, savename=name, savepath='data')
```

anesplot.treatrec.ekg_to_hr.detect_beats(ser, fs=300, species='horse', mult=1) detect the peak locations

Parameters

- ser (pandas.series) the data
- **fs** (*integer*) sampling frequency
- **species** (*string*) in [horse]
- mult (float) correction / 1 for qRs amplitude

Returns df=pandas.Dataframe

```
anesplot.treatrec.ekg_to_hr.plot_beats(ecg, beats)
    plot ecg waveform + beat location
```

anesplot.treatrec.ekg_to_hr.append_beat(beatdf, ekgdf, tochange_df, fig, lim=None, yscale=1) locate the beat in the figure, append to a dataframe['toAppend']

Parameters

- beatdf (pandas.Dataframe) contains the point based location (pLocs)
- **ekgdf** (pandas dataframe) contains the wave recording ((wekg_lowpass)
- tochange_df (pandas.Dataframa) to store the beats toAppend or toRemove
- **fig** (*pyplot* . *Figure*) figure to find time limits
- **lim** (*integer*) ptBasedLim optional to give it manually
- **yscale** (*float*) amplitude mutliplication factor for detection (default=1)

Returns tochange_df: incremented changedf (pt location)

Return type pandasDataframe

methods:

locate the beat in the figure, append to a dataframe['toAppend'] 0.: if not present: build a dataframe:

```
>>> to_change_df = pd.DataFrame(columns=['toAppend', 'toRemove'])
```

1.: locate the extra beat in the figure (cf plot_beats()) and zoom to observe only a negative peak

2.: call the function:

```
>>> to_change_df = remove_beat(beatdf, ekgdf, tochange_df, fig)
-> the beat parameters will be added the dataFrame
```

.in the end of the manual check, update the beat_df

- first : save beat_df and to_change_df
- second [run:]

```
>>> beat_df = update_beat_df())
```

anesplot.treatrec.ekg_to_hr.remove_beat(beatdf, ekgdf, tochange_df, fig, lim=None)
locate the beat in the figure, append to a dataframe['toRemove']

0.: if not present build a dataframe:

```
>>> to_change_df = pd.DataFrame(columns=['toAppend', 'toRemove'])
```

- 1.: locate the extra beat in the figure (cf plot_beats()) and zoom to observe only a negative peak
- 2.: call the function:::

```
>>> to_change_df = remove_beat(beatdf, ekgdf, tochange_df, fig)
-> the beat parameters will be added the dataFrame
```

.(in the end of the manual check, update the beat_df

- first : save beat_df and to_change_df
- second [run]

```
>>> beat_df = update_beat_df())
```

anesplot.treatrec.ekg_to_hr.save_beats(beatdf, tochangedf, savename=", dirpath=None)
save the beats locations as csv and hd5 file

Parameters

- beatde (pd.dataframes) -
- tochangedf (pandas.dataframe) -
- savename (filename) -
- dirpath (path to save in) -
- output -
- -----
- file (hdf) -
- key='beatDf' -

 $an esplot.treatrec.ekg_to_hr.update_beat_df(\textit{beatdf}, \textit{tochangedf}, \textit{path_to_file=''}, \textit{from_file=False}) \\ implement in the beat location the manual corrections from File = True force the disk loading of the data frames$

anesplot.treatrec.ekg_to_hr.compute_rr(beatdf, fs=None)
 compute rr intervals (from pt to time)

Parameters

16

• beatdf (pd.DataFrame) - with 'pLoc'

Chapter 3. modules

```
• fs (integer) – sampling frequency
          Returns with: 'rr' = rr duration 'rrDiff' = rrVariation 'rrSqDiff' = rrVariation^2
          Return type pd.DataFrame
anesplot.treatrec.ekg_to_hr.interpolate_rr(beatdf, kind=None)
     interpolate the beat df (pt -> time values)
          Parameters
                 • beatDf (pd.Dataframe) -
                 • kind (str) – 'linear' or 'cubic' (default)
          Returns 'espts' = evenly spaced points 'rrInterpol' = interpolated rr
          Return type pdDatatrame with evenly spaced data
anesplot.treatrec.ekg_to_hr.plot_rr(ahr_df, param, HR=False)
     plot RR vs pt values + rrSqDiff
          Parameters
                 • pdDataFrame (hr_df =)
                • params – dict containing 'fs' as key
anesplot.treatrec.ekg_to_hr.append_rr_and_ihr_to_wave(wave, ahrdf)
     append rr and ihr to the waves based on pt value (ie index)
anesplot.treatrec.ekg_to_hr.plot_agreement(trenddf)
     plot ip1HR & ihr to check agreement
anesplot.treatrec.ekg_to_hr.append_ihr_to_trend(trenddf, wavedf, ekgdf)
     append 'ihr' (instataneous heart rate) to the trends
anesplot.treatrec.ekg_to_hr.save_trends_data(trenddf, savename=", dirpath='data')
          save the trends data to a csv and hd5 file, including an ihr column
          trenddf: pd.dataframes savename: str dirpath: str
               path to save in (default= current working directory)
     hdf file, key='trends data'
anesplot.treatrec.ekg_to_hr.save_waves_data(wavedf, savename=", dirpath='data')
     save the trends data to a hd5 file, including an ihr column
          Parameters
                 • trenddf (pd.dataframes) -
                 • savename (str) – dirpath : path to save in (default='data')
                 • output -
                 • -----
                 • hdf_file -
                 • key='waves_data' -
```

anesplot.treatrec.extract_hypotension module

Spyder Editor

This is a temporary script file.

anesplot.treatrec.extract_hypotension.extract_hypotension(atrend, pamin=70) return a dataframe with the beginning and ending phses of hypotension

Parameters

- atrend (MonitorTrend object) -
- pamin (float= threshold de define hypotension on mean arterial pressure) –
- 70) ((default is) -

Returns durdf – transitionts (up and down, in seconds from beginning) and duration in the hypotension state (in seconds)

Return type pandas DataFrame containing

anesplot.treatrec.extract_hypotension.plot_hypotension(atrend, durdf, durmin=15, pamin=70) plot the hupotentions phases

Parameters

- atrend (TYPE) DESCRIPTION.
- durdf (TYPE) DESCRIPTION.
- durmin (TYPE, optional) DESCRIPTION. The default is 15.

Returns fig – DESCRIPTION.

Return type TYPE

```
anesplot.treatrec.extract_hypotension.scatter_length_meanhypo(atrend, durdf)
```

draw a scatter plot (hypotensive arterial value vs duration of hypotension) :param trends: :type trends: MonitorTrend :param durdf: :type durdf: pandas dataframe containing the value and duration

Returns fig

Return type matplotlib.pyplot figure

```
anesplot.treatrec.extract_hypotension.plot_all_dir_hypo(dirname=None, scatter=False) walk throught the folder and plot the values
```

anesplot.treatrec.hr to hrv module

```
anesplot.treatrec.hr_to_hrv.build_hrv_limits(spec='horse') return a dico containing HRV limits (VLF, LF, HF) input: spec in ['horse', 'man']
```

anesplot.treatrec.wave_func module

Created on Fri Dec 8 12:46:41 2017

@author: cdesbois

anesplot.treatrec.wave_func.fix_baseline_wander(data, fs=500)

BaselineWanderRemovalMedian.m from ecg-kit. Given a list of amplitude values (data) and sample rate (sr), it applies two median filters to data to compute the baseline. The returned result is the original data minus this computed baseline.

anesplot.treatrec.wave_func.rol_mean(ser, win_lengh=1, fs=500) returns a rolling mean of a RR serie

Parameters

- pd.Serie (ser=) -
- win_lengh (integer) window lenght for averaging (in sec),
- **fs** (int) sampling frequency

anesplot.treatrec.wave_func.return_points(df, fig)

return a tupple containing the point values of ROI

Parameters

- **df** (anesthesia record dataframe) –
- **fig** (pyplot.figure) –

Returns ROI

Return type dict

anesplot.treatrec.wave_func.restrict_time_area(df1, mini=None, maxi=None) return a new dataframe with reindexation

Parameters

- df1 (pandas.DataFrame) -
- mini (integer) miniPointValue
- maxi (integer) maxiPointValue

Returns

Return type pandas.DataFrame

Module contents

3.1.2 Submodules

3.1.3 Module contents

anesthPlot is a package to plot/use clinical anesthesia records for teaching

three way to use it:

1. **run directly anesplot from a terminal** -> PYTHONPATH=<pathToAnesthPlot> python -m anesplot -> generate a quick plotting of most interestings parts

- 2. **from an ipython terminal** -> import anesthPlot.anesplot.recordmain as rec -> trends = rec.MonitorTrend() -> waves = rec.MonitorWave() -> ... and use the objects trends and waves
- 3. import the module in a python environment (see below)

(the presets are actually designed

- · for use with equine anesthesia
- to load data from a Monitor generated datex AS3/5 monitoring machine)

typical use when importing the module to build a clinical case

```
import os import sys
```

import numpy as np import pandas as pd

import anesplot.record_main as rec sys.path.append(os.path.expanduser('~/pg/utils')) from utils import saveGraph import bloodGases.bgmain_manual as bgman

```
paths = rec.paths \; paths [`save'] = os.path.expanduser(`\sim/toPlay/temp/') \; os.chdir(paths [`save'])
```

globals def save_plot(name):

```
filename = os.path.join(paths['save'], 'fig', name) saveGraph(filename, ext='png', close=False, verbose=True)
```

$def\ explore_hdf(filename):$

except: print('{} is not an h5 file'.format(filename))

```
saveName = os.path.join(paths['save'], 'data', 'aname.h5')
```

explore_hdf(saveName)

load and work trendName = rec.choosefile_gui(paths['data']) WaveName = rec.choosefile_gui(paths['data'])

build objects with headers trends = rec.MonitorTrend(trendName, load=True) waves = rec.MonitorWave(waveName, load=True)

or append data (pretreated ones) #trends.data = pd.read_hdf(saveName, 'trend_df') #waves.data = pd.read_hdf(saveName, 'wave_df')

#remove filenames del waveName, trendName

now you are ready to work with loaded trends and waves
